

We have just completed our Internet connection to monitor the operation of the Equaris Enfinity Plus Water Recycling System at our Model Home of

Green Technologies in Afton, MN. You can access that information at <http://24.131.129.158:8081/plc?first>.

**Dometic/SeaLand
VacuFlush Toilet**

**.02 of a Gallon of Water
per Flush**

**Equaris Bio-Matter
Resequencing Converter
(BMRC)**

This is just the beginning of the potential for monitoring not only our equipment, but any other information,

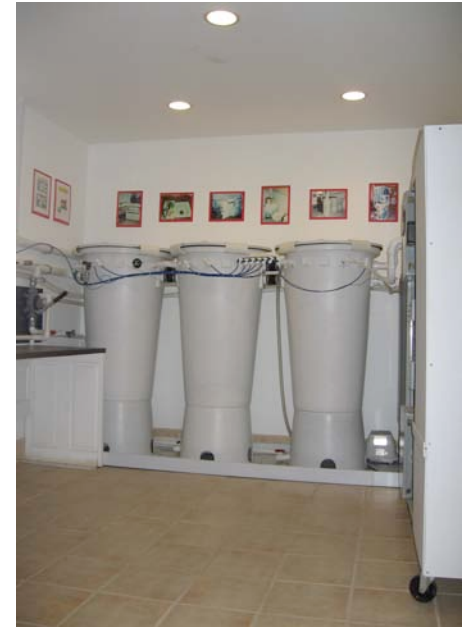

data or controls you wish to install. Our new monitoring system with our Equaris Enfinity Plus Water Recycling System is totally unprecedented in the industry and has the potential for 1,000 inputs and outputs.

It is not complete yet as some more programming needs to be done but we will be improving it dramatically with data recording and offering other monitoring services to include security, smoke and fire protection to all our existing and new customers. Anything ADT can do we will be able to do it better and less expensive.

**Equaris Enfinity Plus
Water Recycling System**

(H2ORS)

**Equaris Greywater
Treatment System**

(GTS)

Please give it a try. It will give you a snapshot of what the numbers are when it is running. If you hit the refresh button and the numbers stay the same that means the machine is not running, as those were the numbers when it shut itself off.

If you want to see it in operation just give me a call and I can turn on the water to make the machine start making new water and then when you hit the refresh button you will be able to see the numbers change as it makes water.
